Math XXX

Mathematics Department
Fort Lewis College

Last Updated: June 30, 2025

Land Acknowledgement

"We acknowledge the land that Fort Lewis College is situated upon is the ancestral land and territory of the Nuuchiu (Ute) people who were forcibly removed by the United States Government. We also acknowledge that this land is connected to the communal and ceremonial spaces of the Jicarilla Abache (Apache), Pueblos of New Mexico, Hopi Sinom (Hopi), and Diné (Navajo) Nations. It is important to acknowledge this setting because the narratives of the lands in this region have long been told from dominant perspectives, without full recognition of the original land stewards who continue to inhabit and connect with this land. Thank you for your attention and respect in acknowledging this important legacy."

Course Information

Course Title	Course Title
Course Number	MATH XXX
Credits	n
Times and Rooms	• <i>Section 1 Time and Room(s):</i> 8:00-8:55am, MWF Noble 110, Th Noble 160 • <i>Section 2 Time and Room(s):</i> 10:10-11:05am, MWF Noble 110, Th Berndt 340 • <i>Section 3 Time and Room(s):</i> 11:25am-12:20pm, MWF Noble 110, Th Berndt 340 • <i>Section 4 Time and Room(s):</i> 2:30-3:25pm, MWF Noble 110, Th Berndt 340
Instructors	• <i>Section 1</i> - Eddie Math (math_e@fortlewis.edu¹) • <i>Section 2</i> - Emilia Numbers (enumbers@fortlewis.edu²)

Course Description. Enter the catalog description of the course here.

Instructional Format. This is a face-to-face course, which means we will meet in person.

Course Materials. Required Text: Enter the required textbook here.

Student Office Hours.

- *Eddie Math's Office Hours:*
- *Emilia Numbers' Office Hours:*

Feedback and Communication. Communication of all course information will occur via Canvas as well as in class. Most assignments will be submitted and graded online in Canvas or Webwork.

Missing Class. If you need to miss class, that is ok. If you miss class, be sure to check Canvas and Webwork for assignments, and try to get notes from a classmate. If you're still having difficulty with the material, use office hours or the Peer Education Center to get caught up. If you need an extension on an assignment, just ask your professor and it will likely be granted.

If you need to miss class for an extended period of time, let your professor know so that we may work out a remote accommodation.

Technology and Software Requirements. You will need to be able to access Canvas and Webwork (online homework system) as submit assignments online. Internet access and a scanning device are required. Calculators will not be used on exams, but will frequently be useful for homework and in class.

Learning Outcomes

Course Learning Outcomes.

- Students demonstrate an understanding of functions in multiple ways including graphical representations, algebraic representations, and verbal descriptions.
- Students will demonstrate understanding of abstract function notation, proficiency working with abstract functions, and understanding functions that are not defined algebraically. This shall include working with affine transformations of functions, definitions of inverses and compositions of functions, and working with functions that are defined geometrically.
- Students will demonstrate proficiency working with parametrized families of functions. These families shall include linear functions, polynomials, rational functions, exponential functions, logarithmic functions, and trigonometric functions. Transformations, inverses, and compositions of such functions will also be addressed. Skills shall include finding parameter values from data, evaluating functions, solving equations, and

¹mailto:math_e@fortlewis.edu

²<mailto:ennumbers@fortlewis.edu>

selecting which family would best represent a given data set/real world application.

Program Learning Outcomes.

- Students will demonstrate competency in Algebra.
- Students will demonstrate competency in Geometry.
- Students will produce and deliver effective written and oral presentations of mathematical material and ideas.
- Students will apply algebraic, geometric, and computational methods in abstract settings.
- Students will apply algebraic, geometric, and computational methods in applied settings.

gtPathways. This course meets the following gtPathway Student Learning Outcomes: Quantitative Literacy.

Competency in quantitative literacy represents a student's ability to use quantifiable information and mathematical analysis to make connections and draw conclusions. Students with strong quantitative literacy skills understand and can create sophisticated arguments supported by quantitative evidence and can clearly communicate those arguments in a variety of formats (using words, tables, graphs, mathematical equations, etc.).

Students should be able to:

1. Interpret Information

- (a) Explain information presented in mathematical forms (e.g., equations, graphs, diagrams, tables, words).

2. Represent Information

- (a) Convert information into and between various mathematical forms (e.g., equations, graphs, diagrams, tables, words).

3. Perform Calculations

- (a) Solve problems or equations at the appropriate course level.
- (b) Use appropriate mathematical notation.
- (c) Solve a variety of different problem types that involve a multi-step solution and address the validity of the results.

4. Apply and Analyze Information

- (a) Make use of graphical objects (such as graphs of equations in two or three variables, histograms, scatterplots of bivariate data, geometrical figures, etc.) to supplement a solution to a typical problem at the appropriate level.
- (b) Formulate, organize, and articulate solutions to theoretical and application problems at the appropriate course level.
- (c) Make judgments based on mathematical analysis appropriate to the course level.

5. Communicate Using Mathematical Forms

- (a) Express mathematical analysis symbolically, graphically, and in written language that clarifies/justifies/summarizes reasoning (may also include oral communication).

The gtPathways Student Learning Outcomes will be assessed through the following signature assignment(s): Final Exam.

Course Requirements and Grading

Final grades will be determined using the following assignment categories (descriptions below):

Assignment Category	Weight
Webwork (Online Homework System)	25%
Weekly Activities	10%
Three Midterm Exams	15% each
Cumulative Final Exam	20%

Grading Scale

Letter Grade	Point Range (P)
A	$P > 93$
A-	$90 \leq P < 93$
B+	$87 \leq P < 90$
B	$83 \leq P < 87$
B-	$80 \leq P < 83$
C+	$77 \leq P < 80$
C	$83 \leq P < 87$
C-	$70 \leq P < 73$
D+	$67 \leq P < 70$
D	$63 \leq P < 67$
D-	$60 \leq P < 63$
F	$P < 60$

Webwork. Webwork is our online homework system. An account has been created for you and a link posted on Canvas. You should check Webwork every class day for new assignments. Their due dates are posted with the assignment. Typically, Webwork assignments will be due at 11:59pm two business days after that section's material has been completed in class. Thus, we have the following:

Day	Day Due
Monday	Wednesday
Wednesday	Friday
Thursday	Monday
Friday	Tuesday

After the due date there will be a reduced credit period of 48 hours for each Webwork assignment in which you can receive 75% credit on all work completed.

Because online homework tells you if your answer is right or wrong as soon as you submit it, and for most questions you will be allowed multiple submissions, doing online homework may take you longer than doing written homework. So, give yourself plenty of time by starting your homework ASAP

after it is assigned. This will give you time to do the assignment and get help if you need it.

Weekly Activities. Each week, typically on Thursdays, class time will be spent on an activity (such as a worksheet) intended to bring together material we have learned in the last week. Group work will be encouraged, but each student must turn in their own assignment.

Midterm Exams. There will be three midterm exams given in class on 9/19, 10/17, and 11/4. The class day before exams will be reserved for review.

Cumulative Final Exam. Your cumulative final exam will be Wednesday, December 10, from 7:30-9:30am. The room will be announced prior to the final exam.

Course Expectations

Save Your Spot. Stay enrolled in this and your other courses this term by attending class and participating in required course activities during the first week of the term. Instructors have the option to disenroll a student from a class if the student has missed at least one scheduled class in person or via Zoom or required online course activity for online courses (check your syllabus for information) during the first 4 days of the week in which the course is scheduled to meet for the first time. This allows students who are on the course waitlist to be added to the course.

Course Workload and Time Management. How can you create a weekly schedule based on your courses and study time needed for success? As long as you know the number of credit hours you are taking, it's easy! In a face-to-face class, one course credit is the same as one hour of lecture per week for a 15-week term. Additionally, you need to plan for a minimum of two more hours of preparation for each credit hour (and that's according to the federal definition of a credit hour). Thus, in this face-to-face 4-credit course we will meet in person for 4 hours per week, and you should plan on a minimum average of 8 hours per week of homework, reading, and preparation outside of class. Some weeks it may be less; some weeks it may be more. This weekly amount of homework and preparation time will typically vary based on a number of factors about you as a learner and student. Please let me know if you fall behind or need any help figuring out your weekly schedule and meeting these course workload expectations.

Diversity and Inclusive Classroom Statements. Each member of this class is responsible for contributing to and maintaining an atmosphere of respect for all other members. This means each of us is responsible for ensuring that:

- All perspectives and experiences are respected.
- Class discussions and individual comments are respectful and do not degrade, stereotype, or promote deficit thinking about any group or individual.
- Each person in the class has an opportunity to articulate their perspective and ideas without being demeaned.

- Students who demonstrate a disregard for this responsibility will be alerted that their attitudes and/or actions inhibit a respectful and safe learning environment. The instructor reserves the right to take appropriate disciplinary action.

Email and Netiquette. “Netiquette” is a protocol for interacting and behaving online. Although digital interactions are not face-to-face, they affect real people; thus, we must be sensitive to the fact that our words impact others. The following are an outline of ways that you can communicate professionally and sensitively online:

1. Be sensitive to others’ cultural, social, political and linguistic backgrounds. Everyone is different and unique. Remember to show respect for our differences.
2. Incorporate professionalism and good taste when composing responses in discussion forums, online collaboration and feedback tools, and other interactive spaces. Avoid profanity and other harsh comments. Minimize your use of slang, as it can be misinterpreted.
3. Avoid using all capital letters as it can be construed as “shouting” online, which can be perceived as aggressive behavior.
4. When using acronyms, make sure to clarify its meaning when you first use in your message.
5. Proofread your responses for accuracy and tone.

Campus Policies

Academic Integrity. What is Academic Integrity? Integrity is the College-wide expectation that students follow established guidelines and common knowledge to maintain ethical standards in their work.

Why does it matter? Integrity in academic matters is vital to all members of the College community. An academic integrity violation by a student devalues the accomplishments of other students, threatens the integrity of the College, and undermines the College’s educational mission. During their time at FLC, students are expected to know, understand, and comply with the ethical standards of the College.

What is Academic Dishonesty? Academic dishonesty is defined as any form of unethical or illegal behavior regarding any academic work--with or without intent. These standards apply to all courses taken on or off campus, and all modes of course delivery.

Examples of academic dishonesty include, but are not limited to, the following:

- plagiarism,
- cheating,
- fabrication and falsification,
- multiple submissions/self-plagiarism,
- misuse of academic materials,
- unapproved and uncredited use of artificial intelligence,

- and complicity in academic dishonesty.

See the full definition of academic dishonesty here: [FLCs-Definition-of-Academic-Dishonesty](#).³

If a faculty member alleges that you have committed an academic integrity violation, they will communicate with you and explain the alleged charges and then submit a report of academic dishonesty using this form: [Report of Academic Dishonesty](#).⁴

Faculty may use any legal and ethical method when identifying an academic integrity violation, including the use of plagiarism detection software and artificial intelligence detection software.

What are the consequences? In-class consequences for a charge can range from a reduced grade or zero on the assignment to a reduced grade or “F” in the course. College-wide consequences can range from academic intervention to suspension or expulsion.

Course Policy on use of Generative Artificial Intelligence: Generative artificial intelligence (GAI), such as ChatGPT and other large language models can be extremely helpful as study aids and personalized tutors. You can use them to help explain complex topics or create additional practice problems. However, **electronic devices and GAI use is forbidden on all exams and quizzes in this class.**

Digital Accessibility. Fort Lewis College commits to ensuring that information technology and digital content it creates or distributes in its programs, services and activities is accessible to all individuals. The [Policy on Accessibility of Information Technology and Digital Content](#)⁵ reflects Fort Lewis College’s commitment to providing access to information technology and digital content to all FLC students, employees and the general public.

Accessibility Resource Center. The Accessibility Resource Center provides inclusive, personalized, caring accommodations for students needing disability-related support. Students are encouraged to reach out to learn more and register for services.

Visit their [website](#)⁶ or email accessibilityresources@fortlewis.edu or call 970-247-7383.

Course Withdrawal Policy. The last day to withdraw from FLC classes with a grade of “CW” (course withdrawal) is Friday, October 31 at 4pm. This is a college-wide deadline that is not negotiable.

To withdraw from a course using a CW, fill out our online [Withdrawal From Course Form](#)⁷ at your [Student Resource Center](#)⁸. You can also visit Skyhawk Station and pick up a Course Withdrawal form, and our staff will process the CW for you on the spot. This Course Withdrawal will not affect your financial aid for this term, and you will still owe the full amount for the class on your student bill. You should also be aware that dropping a course could affect your Pace Towards Graduation, impacting your eligibility for Financial Aid.
